

## CENAC BACKGROUNDER Night Flight Operations – 3 Year Comparison

### Objective

To provide a 3 year comparison of Night Flight Operations at Toronto Pearson Airport.

**Q: What is the 2013 forecasted budget?**

A: The forecasted Night Flight Budget for 2013 is 14,324 movements. This is an increase of 3.7% over the 2012 Budget based on forecast passenger growth statistics. We anticipate that the 2013 actual movements will reach 95% of this year's budget.

**Q: Why was the number of flights less than what was budgeted in 2012?**

A: Weather in 2012 was unusually mild with few winter snow events and summer thunderstorms requiring operating extensions for scheduled flights delayed into the restricted hours. As a result, the yearly total of actual operations was below what was originally planned.
