

## Understanding Growth

### Passenger Traffic

### Pieces of baggage/day

### Growth, changing passenger needs & operational requirements

put new pressure on our baggage system. Here's how the GTAA is ensuring the system continues to operate smoothly:

## TODAY

Streamlining operations with our **airline partners**

Improved processes, including enhancements for **connecting passengers**

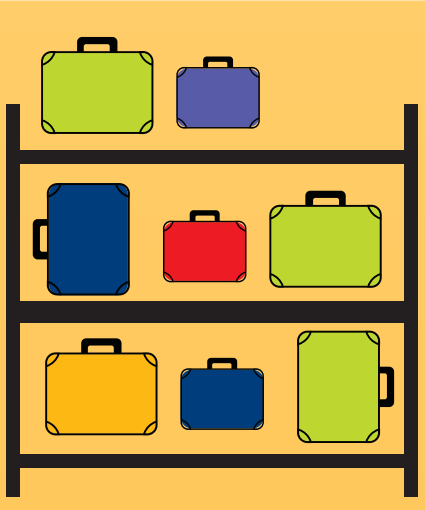

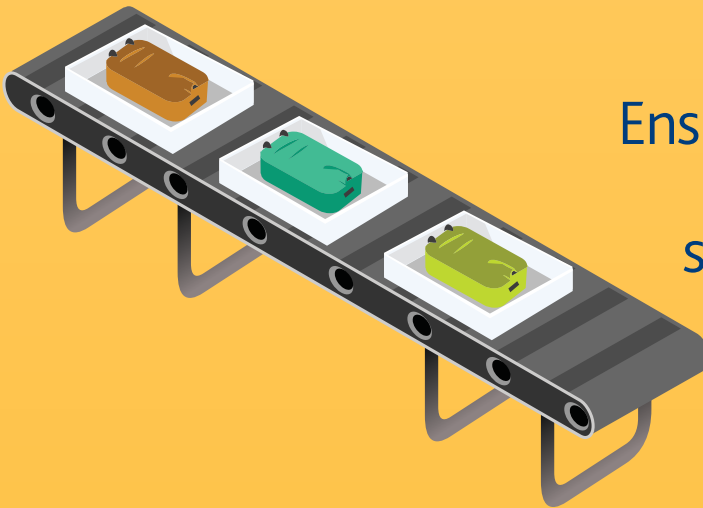

Increased **baggage operator staffing**

## NEXT STEPS

**\$400m** Master Plan investing in the future of baggage processing

Project	Benefit
<b>Automated Bag Storage</b> 	Increases departing baggage belt efficiency by 471%, allowing for additional capacity and reducing staffing costs
<b>Individual Baggage Carrier System</b> 	Ensures improved system stability and tracking
<b>Automatic Baggage Connections Process</b> 	Ability for connecting passengers to transit from gate to gate without claiming and rechecking their bags

**99%**  
of bags reach the aircraft on time

...and we're working to raise that number even higher to ensure our passengers start their family visits, business trips and adventures with bags in hand.
